Portfolio : <https://www.jeetuprasad.in>

GitHub : <https://github.com/jeetu-programmer7887>

PROFILE

Full Stack Developer specializing in the MERN stack and Next.js, with hands-on experience building and deploying production-grade, real-time, and AI-integrated web applications. Skilled in designing scalable REST APIs, real-time systems with Socket.IO, secure authentication flows, and modern responsive UIs with React and Next.js (App Router, SSR). Demonstrated ability to independently debug complex real-time architecture issues and ship full-stack products end-to-end, from database schema to production deployment.

EDUCATION

Bachelor of Science in Information Technology (B.Sc. IT)

Smt. Chandibai Himathmal Mansukhani College, University of Mumbai | July 2023 – April 2026 | CGPA: 9.97/10

Higher Secondary Certificate (Class XII)

Percentage: 90.33% | July 2021 – March 2023

PROJECTS

JSocial — Real-Time Social Media Platform

[Live Demo](#) | [GitHub](#)

React, Redux Toolkit, Node.js, Express, MongoDB, Socket.IO, Tailwind CSS

- Built a full-stack MERN social platform with real-time one-to-one messaging, live typing indicators, and online presence, using a single shared Socket.IO connection per user to eliminate backend registration race conditions.
- Developed a real-time notification system (likes, comments, follows) with deep-linking to public, shareable post pages, and a follow-based social graph with dedicated followers/following views.
- Implemented secure JWT authentication using httpOnly cookies with cross-origin configuration (SameSite=None, Secure), protecting routes on both client and server to prevent XSS-based token theft.
- Deployed the frontend on Netlify and backend on Render, deliberately choosing a stateful host over serverless to support persistent WebSocket connections.

ZYRO: The Jewel Box — AI-Powered E-Commerce Platform

[Live Demo](#) | [GitHub](#)

React, Node.js, Express, MongoDB, Google Gemini API, Groq (Llama 3), Cloudinary

- Built a full-stack luxury e-commerce platform integrating two AI models — Google Gemini for virtual jewellery try-on and Groq (Llama 3) for skin-tone-based styling recommendations from user-uploaded portraits.
- Designed a loyalty engine ("ZYRO Coins") that rewards 10% of order value in redeemable credits, including automated expiration and deduction logic integrated into the order lifecycle.
- Implemented SKU-level inventory management with per-variant (colour, material) stock tracking and infinite-scroll product browsing via the Intersection Observer API.
- Built OTP-based password less authentication and transactional email workflows using Brevo SMTP, plus a cron-based job to auto-update the delivery status of the orders.
- Developed a complete admin suite for catalogue management (resolving UI edge cases like large titles breaking card layouts), order tracking, returns processing, and real-time sales analytics.

JPsyche — AI Mental Wellness Chat Application

[Live Demo](#) | [GitHub](#)

Next.js 16, TypeScript, PostgreSQL (Neon), Prisma ORM, Tailwind CSS, Clerk, SWR

- Developed a full-stack AI conversational wellness application using Next.js 16 (App Router) and TypeScript, engineering a streaming-ready chat API with internal "thought transparency" visibility and graceful error-recovery fallbacks.

- Architected a relational PostgreSQL database on Neon using Prisma ORM, implementing a JSON-based memory profile and rolling conversational summaries to retain long-term user context while strictly optimizing LLM token usage.
- Built robust chat session management—including mid-conversation thread forking, auto-titling, and optimistic UI updates via SWR—backed by a database schema utilizing cascading deletes for data integrity.
- Designed a frictionless onboarding flow using Clerk authentication with a 3-message guest trial, successfully driving user adoption before requiring account creation to unlock persistent chat history.
- Integrated browser-native Text-to-Speech (TTS) with automatic Hindi/English language detection and voice-quality prioritization, alongside a mobile-first, highly accessible UI featuring ARIA labeling and safe-area handling.

SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js (App Router, SSR), Redux Toolkit, Tailwind CSS, Framer Motion

Backend: Node.js, Express.js, RESTful API Design

Database: MongoDB, Mongoose, MongoDB Atlas, PostgreSQL, Prisma ORM

Real-Time & AI Integration: Socket.IO, Google Gemini API, Groq API (Llama 3)

Authentication & Security: JWT, httpOnly Cookies, OTP-Based Auth, Clerk, BcryptJS

Tools & Deployment: Git, GitHub, Postman, Cloudinary, Vercel, Netlify, Render

CERTIFICATIONS

- Full Stack Web Development (MERN Stack) — Apna College
- MERN Stack Backend Development — NetTech India Institute
- Data Analytics — Deloitte
